

# Solution Requirements

|         |                          |               |                                     |
|---------|--------------------------|---------------|-------------------------------------|
| Date    | 02 october 2026          | Maximum Marks | 3 Mark(s)                           |
| Team ID | 6ab63709856a6a91bc38dc02 | Project Name  | Import Data using Transform Maps (S |

## Functional Requirements

| S.No | Requirement            | Description                                                | Priority |
|------|------------------------|------------------------------------------------------------|----------|
| 1    | Excel Data Source      | Allow uploading Excel spreadsheet (.xlsx) as data source   | High     |
| 2    | Import Set Table       | Create staging import set table to hold raw imported data  | High     |
| 3    | Custom Target Table    | Create custom Employee Test table (u_employee_test)        | High     |
| 4    | Transform Map          | Map import set staging columns to u_employee_test fields   | High     |
| 5    | Field Mapping          | Configure source-to-target field-level mapping rules       | High     |
| 6    | Data Transformation    | Transform and clean data values during the mapping process | High     |
| 7    | Coalesce Configuration | Prevent duplicate records by matching on unique identifier | High     |
| 8    | Import Execution       | Execute transform to load records into target table        | High     |
| 9    | Reports Generation     | Build reports based on Employee Test table records         | Medium   |
| 10   | Dashboard View         | Consolidate reports onto a ServiceNow Dashboard            | Medium   |

## Non-Functional Requirements

| S.No | Requirement     | Description                                                       |
|------|-----------------|-------------------------------------------------------------------|
| 1    | Data Accuracy   | Imported records must accurately match source spreadsheet values  |
| 2    | Ease of Use     | Use standard ServiceNow out-of-the-box navigation and configurati |
| 3    | Data Integrity  | Coalesce must prevent duplicate entries when re-importing identic |
| 4    | Visibility      | Reports and dashboard must clearly reflect the current state of i |
| 5    | Maintainability | Transform maps and field maps should be modular and easy to recon |
