Team ID	6ab63709856a6a91bc38dc02	Project Name	Import Data using Transform Maps (S

Solution Overview

The proposed solution uses ServiceNow's Import Set and Transform Map modules to import employee data from an Excel spreadsheet into a custom Employee Test table (u_employee_test). The spreadsheet is uploaded as a data source, staged in an import set table, mapped to the target table through a transform map with field mapping and coalesce configured, and loaded into the platform database. Reports and a dashboard are created on the imported data for operational visibility.

- Excel Spreadsheet - Source employee data prepared with relevant column headers
- Data Source - ServiceNow data source configured to ingest the Excel file
- Import Set Table - Auto-created staging table holding raw spreadsheet rows
- Transform Map - Configuration mapping import set columns to target table fields
- Field Mapping - Individual source-to-target field pairings within the transform map
- Data Transformation - Transformation of data values during the mapping process
- Coalesce - Unique field matching configuration to prevent duplicate records
- Employee Test Table (u_employee_test) - Custom table storing final employee records
- Reports - Visual reports built on the Employee Test table records
- Dashboard - Consolidated dashboard showing all project reports in one view

Solution Workflow

- Step 1: Create employee data in an Excel spreadsheet with defined columns
- Step 2: Create custom Employee Test table (u_employee_test) in ServiceNow
- Step 3: Upload the Excel file as a data source in ServiceNow
- Step 4: ServiceNow creates an Import Set Table and stages the raw rows
- Step 5: Create a Transform Map and configure field mapping (source to target)
- Step 6: Enable Coalesce on a unique field to prevent duplicate records
- Step 7: Run the Transform to load data into Employee Test (u_employee_test)
- Step 8: Verify imported records, create reports, and add them to a dashboard

Team Member	Role	Responsibilities
mohamed arsath	Team Lead	Spreadsheet creation, table creation, reports, dashboard
ajay	Developer	Import Set Table creation, Transform Map setup
rithish kumar	Developer	Data transformation, validation, coalesce configuration
gokul	Developer	Inserting new data in Excel format, Report 1 creation
