## Solution Architecture - Layered View

### Layer 1 - External Data Layer

- Excel spreadsheet (.xlsx) containing employee data columns (e.g., Name, ID, Department, Email)
- Prepared by the team / HR Administrator

### Layer 2 - Data Ingestion Layer

- ServiceNow Data Source: Ingests uploaded spreadsheet file
- Import Set Table: Auto-generated staging table holding raw incoming rows

### Layer 3 - Data Transformation Layer

- Transform Map: Directs data from staging table to target table
- Field Mapping: Connects source columns to target table fields
- Data Transformation: Converts source formats into ServiceNow field formats -
- Coalesce: Identifies existing records to update rather than creating duplicates

### Layer 4 - Data Storage Layer

- Employee Test Table (u\_employee\_test): Custom ServiceNow table storing imported records

### Layer 5 - Presentation & Analytics Layer

- Reports: Created on Employee Test table (e.g., list reports, breakdown by department)
- Dashboard: Displays report widgets in a unified interface

## Architecture Flow
