

Code-Layout, Readability and Reusability

Date	02 october 2026	Maximum Marks	2 Mark(s)
Team ID	6ab63709856a6a91bc38dc02	Project Name	Import Data using Transform Maps (S

Configuration & Component Organization

Because this project uses ServiceNow out-of-the-box platform modules, the project components are structured as platform artifacts. Below is the organization of all configured elements.

S.No	Component	Location in ServiceNow	Description	Reusability
1	Employee Test Table	System Definition > Tables	Custom table (u_employee_test)	Reusable schema for employee data
2	Data Source	Import Sets > Data Sources	Excel file configuration Auto-generated staging table	Can be pointed to updated files
3	Import Set Table	Import Sets > Import Set Tables		Generated per import data source
4	Transform Map	Import Sets > Transform Maps	Maps staging to u_employee_test	Reusable for same file schema
5	Field Maps	Inside Transform Map	Column-to-field associations	Easily adjusted for schema changes
6	Coalesce Config	Inside Field Map	Deduplication on unique key	Reusable on any unique field
7	Reports	Reports > Create New	Visual queries on u_employee_test	Customizable filters & chart types
8	Dashboard	Self-Service > Dashboards	Consolidated reporting view	Widgets can be added or rearranged

Readability & Maintainability Standards

- Standardized naming conventions used for custom table fields (u_ prefix) and transform map
- Field mappings clearly define source-to-target column relationships
- Coalesce flag is explicitly documented on the primary unique identifier
- Reports given clear, descriptive titles reflecting their filter criteria
- Dashboard widgets arranged logically for ease of review and interpretation
- Source spreadsheet adheres to consistent column headers matching target fields
