Project Executable Files & Artifacts

S.No	File/Artifact Name	Type	Location	Description
1	Employee_Data.xlsx	Excel Spreadsheet	Attached / Google Drive	Source employee data spreadsheet
2	Employee Test Table	ServiceNow Custom Table	ServiceNow Instance	Target table: u_employee_test
3	Import Set Table	ServiceNow Table	ServiceNow Instance	Staging table generated from data source
4	Transform Map	ServiceNow Configuration	ServiceNow Instance	Transform map with field mapping & coalesce
5	Reports	ServiceNow Reports	ServiceNow Instance	Reports created on u_employee_test records
6	Dashboard	ServiceNow Dashboard	ServiceNow Instance	Dashboard consolidating project reports
7	Project_Documentation.pdf	PDF	This Repository	Comprehensive project documentation

How to Run / Execute

1. Log into your ServiceNow developer instance (developer.servicenow.com)
2. Create custom table 'Employee Test' (u_employee_test) with appropriate fields
3. Navigate to System Import Sets > Data Sources and create a new data source
4. Attach and upload the Employee_Data.xlsx file
5. Load the raw data into the generated Import Set staging table
6. Navigate to System Import Sets > Transform Maps and create a new transform map 7.
- Set Source = Import Set Table and Target = Employee Test (u_employee_test)
8. Configure field mappings and mark Coalesce = true on the unique identifier
9. Click 'Transform' to run the transformation and load records into target table
10. Navigate to Reports > Create New to build reports on u_employee_test
11. Navigate to Self-Service > Dashboards to create a dashboard and add the reports
